DRAG² XXI Bowl

Julien Carretero

Product Type Vase

This collection deals with a production process inspired by the traditional plaster dragging technique in which the plaster is constrained in shape by a profile while hardening. This technique, traditionally used to produce ornamental cornices, is adapted here in order to serially produce various typologies of objects. The process results in an infinite variation of shapes based on solids of revolution.

Dimensions
Ø15.75" x H4"
Ø40 x H10cm
