

Trono Stool

Umberto Bellardi Ricci

Product Type

Stool

Trono is an original stool that stimulates interaction between architecture and design while exploring the fascinating dialogue between shapes, textures, and different materials.

In his infinite experiments, Umberto Bellardi Ricci takes two simple geometries, the cube and the circle, and transforms them into the support – the throne – for the person who sits on it. Thus, the generous shapes of the seat contrast with the static, minimalist leg, in a structure that highlights the fine contrast between raw materials and refined textures and fabrics. The table that completes the family picks up the material contrast with a round marble top, supported by the same essential leg as the stools.
