

Cassero

Tacchini

Product Type Low Table

Two furnishing elements of pure material. Two architectural blocks in perfect scale. The materiality of the concrete becomes the protagonist and is expressed through irregular surfaces that recall the raw wood with which the formwork is made – the wooden formwork used in construction that holds within it the shape to be created by casting concrete.

Designed by Roberto Sironi, Cassero is a material reworking in which the tactility of the wood grain becomes the distinctive and significant aesthetic element of the project: two low tables with essential and rigorous shapes that bring a powerful architectural sign to the living environment through variation of scale and careful chromatic research.
